

Black Diamond

PREMIUM ICE MELTER

Environmentally Friendly Pre-wet Ice Melter To Rapidly Melt Ice and Snow

Black Diamond is a prewet, ice-melting product. Black Diamond contains a blend of naturally occurring crystal and liquid ice melt products. Black Diamond is created through the application of a high-performance liquid de-icer added to a blend of premium screened crystal ice melt by using "prewetting" technology. Through the prewetting process, this high-performance granular ice melt can be made to melt faster, last longer and perform better at lower temperatures.

Why A Prewet De-icer?

De-icing products don't begin to perform until the solid becomes a liquid. It is this liquid that does the actual job of melting. Through use of prewetting technology, we have encapsulated each crystal in a high performance liquid de-icer. This feature gives Black Diamond superior performance, reduced bounce and scatter, corrosion protection to spreading equipment and minimizes environmental impact.

De-icing Packaged Products

With Black Diamond, through reduced application rates, fewer chlorides are placed into the environment. In the production of BlackDiamond, the latest in high-yield, anticorrosion technology is utilized, therefore making it less corrosive. Black Diamond provides consumers with a complete blended product in each crystal. BlackDiamond is produced from all natural ingredients. The only processing done to Black Diamond is the blending of the product's components. When used properly, it should not be harmful to vegetation. It is safe to handle and is not known to stain shoes, carpet, cement, or asphalt.

Uses and Application

Black Diamond's -20 degree melting capacity rivals that of straight calcium chloride and magnesium chloride, but at a much lower cost. All de-icers must liquefy in order to chemically perform. Through the prewetting technology, Black Diamond premium Ice Melter performs to specifications almost immediately. When applied to a snow-covered surface, Black Diamond Premium Ice Melter quickly begins to dissolve and penetrate snow and ice. The bond between the ice and pavement is then broken, which allows loosened ice and snow to be easily removed.

FEATURES/BENEFITS

Melts Ice/Snow

- Begins working immediately
- Colored Purple to help measure spread
- Safer for roads and sidewalks
- Effective to -20 degrees
- Non-tracking on carpets and floors
- Reduces bounce and scatter
- 40% more cost effective than rock salt
- Easy storage
- Long term storage
- Reduces wasted product

Low toxicity

- Non hazardous
- Environmentally friendly
- 100% Biodegradable

Less damage to concrete/vegetation

- Improves beautification of property
- Safe for Concrete, Vegetation and Pets when used properly

Readily available

- No special training required
- No special equipment required
