

Blue Diamond

PREMIUM ICE MELTER

Premium Blended Ice Melter To Rapidly Melt Ice and Snow

Blue Diamond Premium Ice Melter is a high performance blend of proprietary calcium chloride pellets and premium screened rock salt that is treated with magnesium chloride. When combined, the Blue Diamond Premium Ice Melter formula produces a superior ice melting product that is fast acting, non-tracking on carpets and floors and has a long lasting residual melting power. Blue Diamond Premium Ice Melter is an environmentally friendly product that is biodegradable.

All deicers (whether salt or specialty melter) attract moisture to form a liquid brine. This brine has a lower melting point than the ice and snow around it and so begins to melt its colder surroundings. Traditional melting salt, or rock salt, has an effective melting temperature of around 5°F. Many ice melters will blend rock salt with other ingredients with even lower melting temperatures to work in more extreme conditions. Blue Diamond Premium Ice Melter combines traditional melting salt with a proprietary calcium chloride that is treated with magnesium chloride. This triple threat combination will be effective in temperatures as low as -20°F.

Choosing the right melter can help save time and money while reducing environmental impact. When temperatures drop below 5°F, melters that contain calcium chloride are best. These melters will clear thick ice and snow quickly in extreme temperatures to help prevent painful slip and fall accidents. In "extreme" winter conditions, Blue Diamond Premium Ice Melter will effectively melt snow and ice, but is safer for people, plants and pets.

Even spread of ice melt is critical in the removal of ice and snow. Blue Diamond Premium Ice Melter is colored blue to help maintain even spread without the waste. Blue Diamond Premium Ice Melter's patented blue dye is non-tracking on carpets and floors.

FEATURES/BENEFITS

Melts Ice/Snow

- Begins working immediately
- Colored Blue to help measure spread
- Safer for roads and sidewalks
- Effective to -20 degrees
- Non-tracking on carpets and floors
- Significantly reduce costs
- 40% more effective than rock salt
- Easy storage
- Long term storage
- Reduces wasted product

Low toxicity

- Non hazardous
- Environmentally friendly
- 100% Biodegradable

Less damage to concrete/vegetation

- Improves beautification of property
- Reduces replacement maintenance cost
- Safe for Concrete, Vegetation and Pets when used properly

Readily available

- No special training required
- No special equipment required
